

GIVEUP CRYPTO

GIVEUP NFT
\$GIVEUP TOKEN

Hòa Community
(Litepaper v1.0, author: BEZU, 14 July 2023)

A. WHAT DOES THIS PROJECT (GIVEUP NFT) DO?

When a person or a team want to deploy a project they need fund so they do Crowdfunding.

When an entity is poor and hungry more times than full, he or she simply wish to eat enough, how can he/she make the wish come true... is there any kind of WishFunding service to help ?...

When a crypto project are in great success, it only Dream that SEC will approve all their activities and never sue them for any reasons whatsoever ... may I temporary call it DreamFunding ?...

When parents found that they lost many normal healthy things in life and afraid those things will extinct in the time of their children, where should they raise a voice of remembrance ? ... may I temporary call it a VoiceRaising action ?...

This project is to build a smart contract collection with User Interface for CrowdFunding that blend with Uncovered Application of WishFunding, DreamFunding, VoiceRaising.

B. What makes THIS PROJECT unique? (Abstract concepts: laws, paradox applied)

1. Help people to solve their own PARADOX in their own AWAKENING process: by PRATICING UNIVERSE'S LAWS conveyed via the project's NFTs. and
2. What are UNIVERSE'S LAWS this project want to deploy? there are many for you to choose, I only choose 3 to convey into NFTs of this project:
 1. The Unity law in many names: Trinity, Harmony, Fibonacci, Hòa (Vietnamese)
 2. Set of Hermes Trismegistus' principles.
 3. All wishes are fulfilled oneday!
3. What specific PARADOXs this project want to deploy?
 1. The counter immensity world of what is called "ENTROPY" (or similar word such as CHAOS, DISORDER...), for example they're: NEGENTROPY, PEACE, ORDERLINESS...

The more I want something in 'entropy world' the harder not only for me to get what I want but also for other to get what they want, it's not my saying, it's my own expand understanding of entropy definition.

But I never choose to utilize the ENTROPY'S PARADOX until now.

To fullfill my wanting, **I choose the paradox of wanting which is giving up. That why I name this project GIVEUP CRYPTO and do it to check:**

- If people rate it is success, maybe I do it right and everybody can be sure that Paradox can be solve this way.
- Next, they can imitate to apply for themselves to widen the sample rate.
- If they public their result they also may help others
- But if it is rated failure, it's because my limitation, I still hope other can continue to try BECAUSE the SAMPLE RATE ARE TOO SMALL NOW!

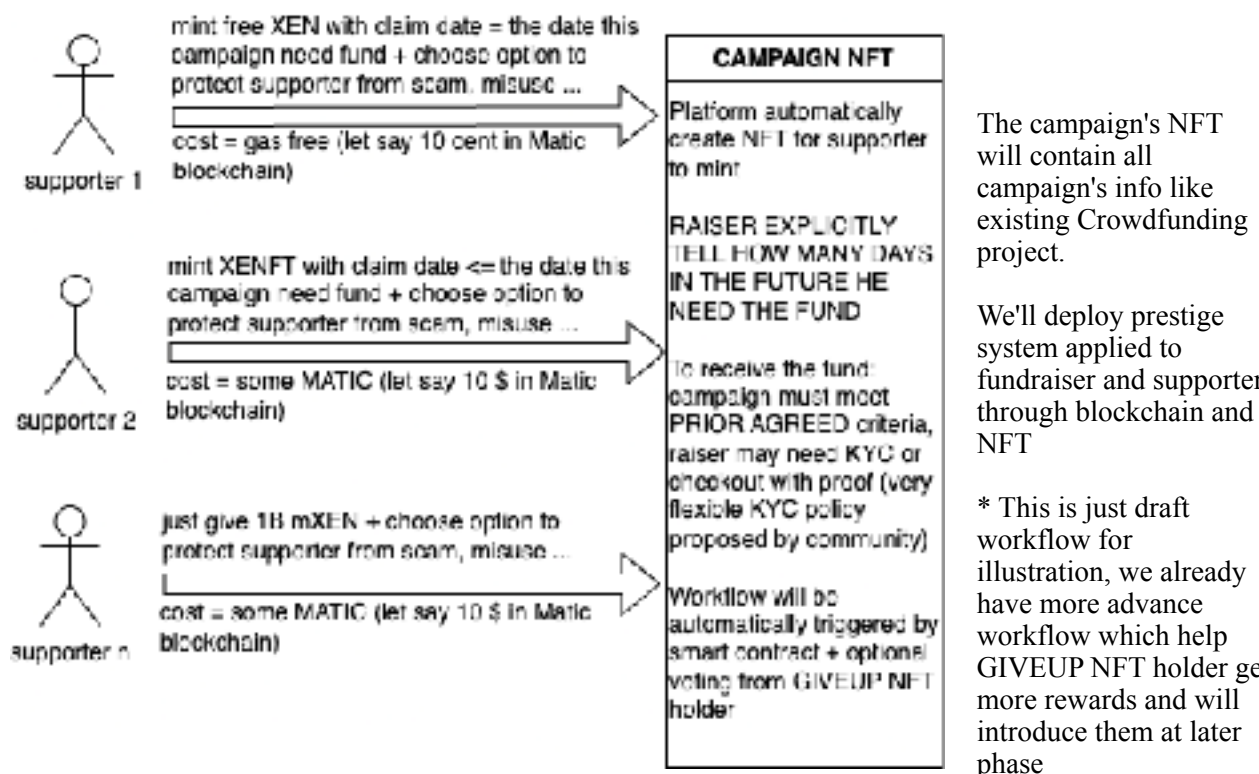

Just reading to here but Who can guess what I'd like to do will deserve to get 1 GIVEUP NFT for free!!! After reading to the end and check that your guess is correct, please tweet me! (limited time)

C. What problems this project solve and what methodology used?

- Fill in niche markets which Traditional CrowdFunding and existing Crypto Crowdfunding projects not yet covered that are:
 - Individual need, no matter small or big, as long as they have a need.
 - Collective wish: that mean you do not need to have team or fund to deploy an app or a solution you want. All you need is a mere idea, a voice, a blessing, a call to action ect and you can deploy a trillion of them via our platform as long as you feel they're worth to exist (we respect the Permissionless feature of blockchains), or you help other to deploy people wishes (dream, voice, solution ...) and help them to fulfill.
 - Break down barriers 'I have NO money to help': **YOU DO NOT NEED TO HAVE MONEY TO OWN A SHARE OF A PROJECT OR TO HELP YOURSELF AND ORTHERS, SERIOUSLY!**
- Deploying 'FAIRNESS' mechanism to help raiser get what they deserve:

Traditional CrowdFunding and existing Crypto Crowdfunding haven't record the campaign results and related information into the blockchain for datamining, we're the pioneer try to record those information on blockchain for our next generation.

We'll not skip best practice of existing system especially KYC, moreover we'll even improve and innovate normal KYC process for the good of everyone.
- The main methodology is to utilize "free to mint" NFT, token technology as means to support a campaign as illustrated below:

- Can be use by everyone, no matter if you're 7 years old or 70000 years old, literally anyone.
- Can raise any amount of money, can donate to any project (let say 10 USD cent only).
- Owned a share of platform if you donate to a campaign or create a campaign which later success and bring blissfullness for all.
- CAN WISH, RAISE WISH (OR SIMILAR THINGS) INSTEAD OF RAISE FUND- HELP OTHER TO FULLFILL THEIR WISH!
- No limitation to enter, the limitation is your
- Contributing to other crypto ecosystem which support basic right like XEN by forever locking its coin/ token to help decrease it supply
- Tokenomy are carefully and uniquely designed to harmonize all parties involved.

D. Is the project profitable?

1. At beginning stage, only "free to mint" cryptocurrency type (let use XEN for illustration purpose) are used. When a campaign end, *XEN* raised will temprary be locked in platform fund (a multisig wallet) ~ maximum 3 months if:
 1. The campaign failed to raise enough amount of XEN within a deadline which were set by the raiser before publishing the campaign. AND within this maximum time (propose 3 months) if the raiser don't restart last failed campaign again, that locked fund will belong to platform fund forever.
 2. Stake rewards of locked fund always belong to platform fund.
 3. ALL *XEN* LOCKED IN MULTISIG PLATFORM FUND FOREVER REMAIN LOCKED, ONLY IT'S STAKE REWARD ARE ALLOW TO WITHDRAW. THOSE LOCKED *XEN* WILL BE THE BACKUP TO MINT MORE GIVEUP NFT (for GIVEUP NFT holder) IN OPERATION PHASE.
 4. Platform also receive *XEN* as fee when platform's services are used such as interacting with platform's NFTs ...

2. *XEN* raised for the purpose of community goodness (usually see in VoiceRaising, DreamFunding ... type), maximum 90% of them will be transferred to entity who deploy the campaign, the remain or the surplus is kept for GIVEUP NFT holder as rewards for supervising operation (via voting, it's the reward for participating).
3. Entity who want to deploy campaign for the platform or get similar privileges must DESTROY GIVEUP NFT to get this right (like advertising company buy advertising slot) => Demand and Deflation of GIVEUP NFT.

Note:

- Other type of asset besides above *XEN* will be use if the platform can develop and expand in future.
- For survival purpose at the beginning phase, we should focus on 1 blockchain first while prepare cooperation plan with other chain.

E. DETAIL WORKFLOW

(Detail workflow are the MUST HAVE to code smart contract and for auditing, that is my responsibility and they will be publicly released in later stage)

F. What is the inspiration for this project?

I'm an computer science engineer, a project and a product manager, I'm also an amateur dev and I've been in crypto for awhile until recently (2023) I know about the XEN project (born by Mr. [@MrJackLevin](#) @lbelyaev). This project allow people to mint token for free except paying gas. That mean every one have equal opportunity to have this token with the same price if not count gas fee in, moreover they have a chance to possess more token if they're willing to wait a longer time than normal. People call it "free to mint" cryptocurrency.

This type of cryptocurrency although very cheap, it's not useless because it's still worth some little BTC, ETH, USDT ect if you want to buy it right away via exchange, it's also have built in mechanism to deflation if the demand increase.

So in real world "free to mint" token similar to thin air. Air is free to breath, air is not useless and air support many life's activities.

If we see this type of token in concrete concepts such as: store as value, means of exchange ... it's totally fine. But if you see it in abstract concepts such as a mean to convey ideas, voice, wish, dream ect (like air to breath not to sale although it's totally can be sold) it'll be more than ok because we'll get both abstract and concrete utilities of it! Moreover with abstract utilities you'll also separate yourself with SEC's interested which is to guard the stable coin.

What I want to explore more are:

- How to utilize these abstract ability as a proof of participate for people who want to participate in social good, in exchange they'll increase or decrease their multi-aspect of their prestige.
- Turning the results of their multi-aspect prestige to concrete results such as:
 - Paying their own tax! (i.e paying tax by one's credit/ prestige!)
 - Contribute to their local community!

And I sincerely to invite you to explore these opportunities with me!

Thank for reading so far, if you think like me, please read more in the section: COPYRIGHT, TRADEMARK AND LICENSE (at the end).

G. What makes GIVEUP NFT unique?

1. Not born from thin air: Value backed by locking a big amount of 'free to mint' crypto currency. This amount increase 10% monthly at mint phase. Price intend to equal the locked amount of 'free to mint' cryptocurrency, e.g 1 GIVEUP NFT = 1B mXEN. Quantity at phase 1 (initial) intend to be 10.000 pcs.
2. Designed to become a store of value: Share profit, rewards from DAO' smart contract fund.
3. Designed to store owner's credit and prestige: Holder will have highest Privillage in DAO's activity in comparision to non-holder. Privillages also different between holders base on their activities record while holding GIVEUP NFT.
4. Unique mutual support relationship with \$GIVEUP token.
5. Total and Circulation supply will be controled via many phases by real need. (see Tokenomy - emission).
6. Hold, lock and stake "free to mint" cryptocurrency.
7. Withdraw levels of "free to mint" cryptocurrency reward are based on GIVEUP NFT trait, trait aquired via platform activity (dynamic NFT).

H. What makes \$GIVEUP token unique?

Together with GIVEUP NFT, \$GIVEUP token make a whole picture of GIVEUP CRYPTO TOKENOMY which express fairness and careful design:

- UTILITY PURPOSE OF \$GIVEUP TOKEN:

- Is to be traded easily on any exchange: total supply is fix, circulating supply follow emission schedule.
- Design to support GIVEUP NFT: Can be burnt to redeem GIVEUP NFT at any time in future.
- No inflation, no staking
- Only deflation: profitable and useful activities in GIVEUP NFT DAO ecosystem will lead to \$GIVEUP token burnt which lead to \$GIVEUP deflation.
- Means of payment: Paying dev, community, adoption plan ... and hacker :).
- \$GIVEUP token prepresent for phase 2: so they can only be minted **after** GIVEUP NFT are fully minted at phase 1. I.e there'll be no \$GIVEUP token if no one is interested in minting \$GIVEUP NFT enough to reach it's max cap.
- Like GIVEUP NFT, \$GIVEUP token is minted by locking 'free to mint' cryptocurrency. \$GIVEUP price = 1/100 GIVEUP NFT.
- Quantity minted will be capped = 100 x total GIVEUP NFT at phase 1 (e.g 1.000.000)
 - pre-sale 15% = 150.000 \$GIVEUP token, discount 50% for GIVEUP NFT holder, each GIVEUP NFT hold will get discount for 100 \$GIVEUP token only. E.g: if you hold 1 GIVEUP NFT (*identified by token id), you can only buy maximum 100 \$GIVEUP with half price.
 - public sale 15% = 150.000 \$GIVEUP token, NO discount, OPEN to everybody.
 - 70% remain will be distributed base on Emission Schedule below.

I. Tokenomy and Emission schedule:

Phases of NFT and token sale

Phase	Start date	End date	Event
Testnet	15 Aug 23	15 Sep 23	<ul style="list-style-type: none"> - Start to mint testnet GIVEUP NFT at 07:00 (UTC+7). - Public this litepaper v1.0. - Testnet platform with UI. - Illustration of problems this project solve.
Phase 1	16 Sep 23	when all GIVEUP NFT are minted	- Start to mint mainnet GIVEUP NFT at 05:00 (UTC+7) . (chain is not defined yet)
Phase 2	after phase 1	when 30% \$GIVEUP token sold	trigger minting \$GIVEUP token when ALL GIVEUP NFT are minted at phase 1
Phase 3	after phase 2	open	<ul style="list-style-type: none"> - No more \$GIVEUP token will be minted, the smart contract is not upgradable. - GIVEUP NFT: can only be minted by 2 ways: <ul style="list-style-type: none"> - Burn \$GIVEUP token to redeem GIVEUP NFT with fix price. - In future when the DAO's smart contract (platform fund) accrue real value and profit.

Emission schedule of remain 70% of \$GIVEUP token (after 30% were sold at phase 2 - pre-sale and public sale):

- 30% for open source code development: include bug and hack bounty, rewards dev contribution, outsourcing, ect.
 - 7.5% 1st year 2023: focus on auditing and open source code.
 - 7.5% for 2nd year 2024: finish 100% coding, highest level of auditing and open source, deploy all features .
 - 15% for 3rd - 10th year (2025-2032): for maintenance and upgrading.
- 30% for adoption activities (detail in section "Using Adoption Fund")
- 10% to fund me to: help me to work fulltime for this project: I plan to cooperate with an Australian company (or organization) or establish new entity in Australia (may call Hòa Community) which will focus on supporting this project in long term.
This 10% fund will release 1% monthly, (end in 10 months) and MUST BE APPROVED BY GIVEUP NFT holder as agreement for me to officially to work for this project.

Who sign the payment bill which emit \$GIVEUP from 60% allocation:

- At first step, the community (include \$GIVEUP NFT holder and non holder that have contributing record for the project) make proposals such as: coding development, recruiting ...
- Next, all results of work done are rated by community via voting.
- Then \$GIVEUP NFT holder sign the payment bill to pay workers.

Security of fund and smart contract: will be put to 1st priority, not only all fund and smart contract are managed by multisig wallet but also they have to have the public workflow, model for community to easily participate in management and must have 3rd parties auditor as advisor and maintenancer roles.

Using Adoption Fund - 30% of total \$GIVEUP token:

Below are draft plan and will revise with \$GIVEUP NFT holder later on:

- Salary for Recruiting talent: 15% for 3 years operation.

- + CTO: manage open source campaign, audit process, security.
- + CEO: implementing existing plans and policies.
- Fund for adoption: 15% for 3 years operation, main focus: easy to use app for elder people; playground for younger even children to play online and OFFLINE to practice good behavior; protocol to help local community to harmonize past, future with present; active government compliance especially SEC.

After maximum 3 years operation, the platform must self funded, self sustain, it's the goal of a healthy DAO.

J. ROADMAP

- **15th Aug 23:** see section I. Tokenomy and Emission schedule
- **16th Sep 23:** see section I. Tokenomy and Emission schedule
- **Operation phase: after 16th Sep 23**
 - Grand Opening milestone: is the time when 30% max supply of \$GIVEUP token (~ 300.000 token) are sold in public sale.
 - Begin alpha testing phase + prepare plan for other chain.
 - **START RECRUITING FOUNDER TEAM TO SHARE THE MULTI-SIG WALLET!**
- **15th March 24:** start Beta testing phase
- **18th May 24:** end Beta testing phase, official release, holder now can vote how to reward themselves with more GIVEUP NFT or "free to mint" cryptocurrency.
- **15th Aug 24:** expand to other chain if conditions are met
- **30th Oct 24:** summarize, reporting and planning activities for 2025 development
- **2025:** focus on adoption: help user sell, evolve their NFT
- **2026:** focus on adoption: make this project DAO self funded and sustainable, deadline for founder to handover.

Note: all date are estimated and may changed upon reality

When exchange?

At begin phase please ask who control the 30% initial supply of \$GIVEUP token at pre-sale and public sale!

After that the GIVEUP NFT holder may decide.

But my plan is not using any fund for listing especially using Adoption Fund because one purpose of Adoption Fund is for SEC's compliance, not SEC's attention.

I'm also not interested in making \$GIVEUP listed with stable coin also but I'm interested when \$GIVEUP is listed with "free to mint" crypto e.g \$GIVEUP/mXEN ect. and prefer dex than cex where trader can bear their own responsibility.

K. FAQ

When Binance?

Depend upon that entity above, please ask them. But if Binance contact me, I'm happy to inform you all asap! Always love cooperation as long as they're help me more focus on this project!

When Lampo?

I'm glad you asked but your question is quite modest, anyway please read section B.2.3. "All wishes are fulfilled oneday!" and try to find that teaching in ancient master story. If you share the result with community, you'll get 1 GIVEUP NFT for free as rewards (limited time).

Is this project serious or just a SCAM?

I don't know, it's up to your DISCERNMENT, I just can:

"I solemnly SWEAR as the founder of this project, to try my best to make this project success, to follow all intention which are written down in this Litepaper, keeping this Litepaper up to date and well inform together with the project. After planned time and I've tried my best to deploy the project, the project may fail or success but I'll never scam or cheat people whatsoever. I even silently set my own punishment which is very hard and strict if I betray my swear."

You have my words.

L. COPYRIGHT, TRADEMARK AND LICENSE:

First, let name it "GIVEUP", it maybe called as GIVEUP project, GIVEUP methodology, GIVEUP crypto ect.

You are very welcome to fork, to inherit from it and you can announce publicly that you do so as long as you keep just 4 basic attributes of GIVEUP project:

1. MUST be open source.
2. Founder have to take responsibility by SWEARING to devote to the project and not to scam or cheat people.
3. Problem solving mindset and actions IS harmony/ trinity/ unity/ Fibonacci sequence/ Hòa (Vietnamese) ect. (You'll understand the meaning if you understand it! I can not explain it at length cauze it's your own excercise!)
4. Owner must handover everything within a prior agreed timeframe.

Those 4 attributes are traditional way and I'd like to remind you about them. If you omit just 1 attribute, please feel free not mention this GIVEUP project, if you keep them all and not mention about GIVEUP project it's also very fine! I'd like to see the spirit of it spread, not the name!

This copyright, trademark and license are loosely made to looking for like-mind people!
